This memo is to clarify the process to address Onsite Wastewater Treatment Systems (OWTS), more commonly referred to as Septic Systems, for the construction of new homes, demolition and replacement of existing homes, and construction of additions or alterations to existing homes.

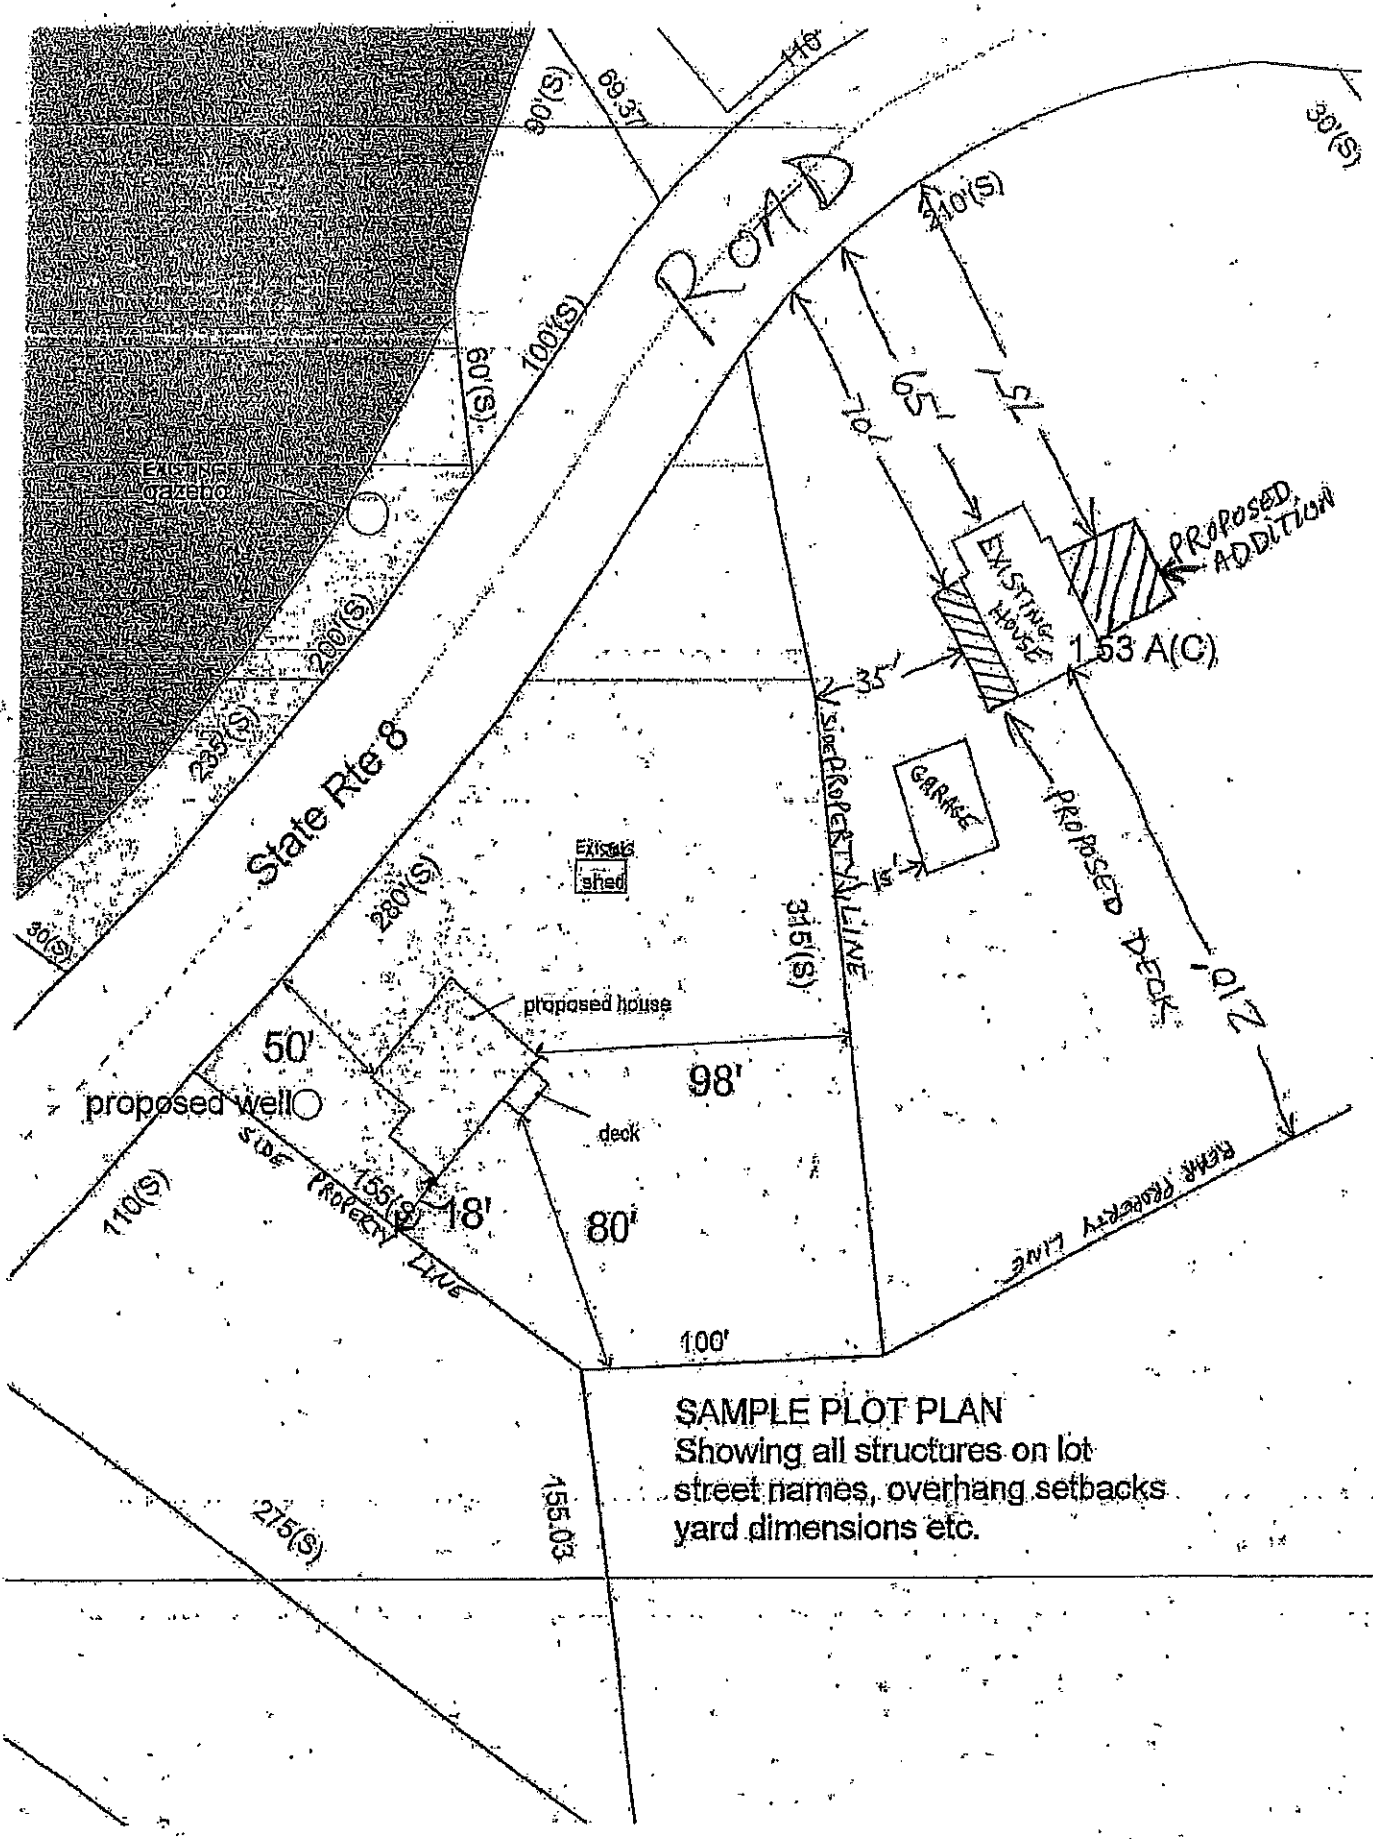

As per New York State Department of Health Individual Residential Wastewater Treatment Systems Design Handbook and NYS DOH Fact Sheet issued January 13, 2004, and to promote the Health, Safety and General Welfare of the community by insuring that sewage and other wastes are disposed of in a manner that will not create a health hazard, adversely affect the environment, or impair the enjoyment or use of property, the following shall be adhered to:

**Licensed Design Professional:** The Department of Health and the State Education Department recognize that, generally, OWTS design activities come within the definition of the practice of professional engineering or architecture under Article 145 or 147 of Title VIII of the New York State Education Law and that OWTS designs must be prepared by a design professional appropriately licensed or otherwise authorized under such law. Please be advised that licensees providing OWTS design services must be qualified to provide those services based upon education, training, and experience. Any licensee providing services that they are not qualified to provide may be subject to professional misconduct charges. OWTS design activities include the evaluation of surface and subsurface site conditions at a defined parcel of land which may include the investigation of soil characteristics, the performance of soil percolation tests, the determination of subsurface boundary condition and depths, the measurement and recording of existing surface features both natural and manmade, and the subsequent application of these data and the data related to proposed wastewater generation to design an OWTS. These activities generally fall within the scope of practice of professional engineering or architecture.

**New Residential Construction:** The design of all new residential OWTSs (including conventional systems) shall be performed by an appropriately licensed design professional, as defined above. The design may also be issued/approved by county health departments where such issuance/approval is performed and authorized by an appropriately licensed design

professional on staff. Private practice engineers and architects, and engineering and architectural firms with appropriately licensed design professionals may also provide such services.

**Additions or Alterations:** An OWTS evaluation shall be performed and submitted by a licensed design professional for home alterations resulting in an increase in the number of bedrooms, for complete home replacements (including those resulting in the same number of bedrooms) and for alterations resulting in significant increases in wastewater generation. (As per DOH Individual Residential Wastewater Treatment System Design Handbook- "Wastewater treatment system expansion to meet an actual or potential occupancy increase (i.e. adding rooms to a residence that will or can be used as bedrooms) shall be in accord with Appendix 75-A requirements. Expansion, attics, basements, sleeping porches, dens, and recreation rooms which may be converted to additional bedrooms in the future, should be considered in calculating design flow.") The evaluation must document if the existing OWTS complies with applicable State and local design standards, if the OWTS and its components are in satisfactory condition and functioning properly and if the existing OWTS can properly treat the proposed increase in wastewater generation. If the existing OWTS does not comply with regulatory design standards or needs significant modification, the licensed design professional shall prepare plans and oversee the installation of the alterations to the OWTS. This may include incorporating appropriate mitigated measures and/or designs as such ordinarily come within the scope of practice of professional engineering.
